(54) Title: COUNTER CURRENT MIXING REACTOR

(57) Abstract: A mixing reactor for mixing efficiently streams of fluids of differing densities. In a preferred embodiment, one of the fluids is supercritical water, and the other is an aqueous salt solution. Thus, the reactor enables the production of metal oxide nanoparticles as a continuous process, without any risk of the reactor blocking due to the inefficient mixing inherent in existing reactor designs.

WO 2005/077505 A3

(88) Date of publication of the international search report:
10 November 2005
Date of publication of the amended claims: 12 January 2006
